TRUE or FALSE?

We clear up doubts around digital helpers!

Are digital assistants too expensive?
Quite the opposite!
The smart bed pad that alerts relatives via an app when help is needed costs less than 1 € per day over the course of a year.

Do digital assistants replace people?
No way!
The loving attention of partners, children and grandchildren is extremely important for people in need of care. But family members need time to relax and sleep. The smart bed pad keeps an eye on grandma all night long.

Will I be monitored at home?
No!
The bed pad assesses movement, moisture and absence from bed. The sensor in the overlay registers physical changes, but no acoustic or visual signals. The purpose is to help you, not to monitor you!

AVAILABLE NOW!

My CARE COMPANION

The Care Companion consists of 4 parts

1. **Bed pad:** This is the part that is placed on your mattress.
2. **Control box:** This box determines the status of the overlay and sends it to the gateway.
3. **Gateway:** This small transmitter unit receives the status of the control box and the optional emergency call.
4. **Mobile App:** The free ThevoSmart App for operating the Care Companion.

Now with family home emergency call!

The intelligent bed pad differs significantly from conventional toppers

- detects moisture, movement, bed absence, etc.
- alerts relatives and other caregivers
- is 3 times thinner than comparable editions
- is waterproof and breathable, washable at 95° and suitable for tumble drying
- looks like a normal mattress topper

Hello,
I'm **Saskia**!

Are you curious about our Care Companion?

Then I would be happy to advise you! Simply contact me by phone at

Family-friendly home care assistance

- BED EXIT ALARM
- POSITIONING INTERVAL REMINDER
- LACK OF MOVEMENT ALARM
- MOISTURE ALARM
- FAMILY SUPPORT NETWORK
- OPTIONAL: FAMILY EMERGENCY CALL

Thomashilfen

Can my smartphone help me with caregiving?

"My husband and I often can't find peace at night because questions and doubts keep running through our minds."

- Is my father, who has dementia, wandering around the apartment again?
- Have I changed his lying position often enough to prevent pressure bedsores from developing?
- Does he return in a timely manner after getting out of bed, or has he perhaps fallen?
- Is the incontinence material still dry enough?
- Who will be there if I can't be there? How could I involve our family, friends or even neighbors?
- How can my father signal me an emergency?

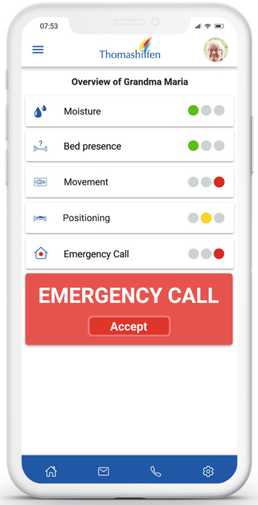
THE ANSWER IS YES!

The Care Companion care cockpit is a family-friendly care support system (for the home) that recognizes the status of the person in need of care in bed and displays the information in an easy-to-understand traffic light system.

You can see at a glance whether there is cause for action.

Important changes are immediately displayed on your cell phone via push notification. The app therefore keeps you up to date wherever you are and provides relief and security in your everyday care routine.

NEW: Your family home emergency call - because every second counts!



For your loved ones! So that life at home remains possible for a long time.

Your **Smartphone** informs you immediately about ...

Absence from bed

The pad registers if your loved one does not return after going to the toilet.

- *No "walks" at night*
- *Quick help in case of falls*

Risk of bedsores

The Care Companion checks the patient's movements and alerts if repositioning is necessary.

- *No chance for bedsores*
- *Less to worry about for relatives*

Incontinence and sweating

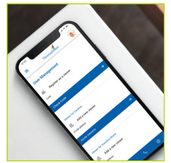
Moisture in bed is uncomfortable and increases the risk of an infection.

- *Detects even small amounts*
- *No lying in own urine*

Optional emergency call for help

With the optional emergency call function, your relative can send a family emergency call at the touch of a button and start the alarm chain.

The emergency call bracelet and chain are battery-free and maintenance-free.



Together instead of alone

with the app-controlled caregiver function (relative function), any number of helpful family members or even neighbors and friends can be included in the care process Spread care over several shoulders
